Alphabetic Command Summary

Default settings are **bold**.

Basic Command Set

Command	Function		
$	Display help for the Basic command set.		
A*n*	Attention prefix: informs a sensor identified by "*n*" that a command is coming. A*n* must proceed all commands. Only the numbers (n) 1-256 maybe be used as sensor identifiers; factory switches are assigned 0 by default and must be assigned a unique identification number before initial network installation.		
E*n*	Command mode echo. Enables or disables the display of your typed commands.		
	E0	Command mode echo OFF. Your typing will not appear on the screen	
	E1	Command mode echo ON. Your typing will appear on the screen.	
F*n*	Alarm Alert Flag. Enables or disables Alarm Alert Flag. When OFF, only one software alarm state alert will be issued. When ON, a software alarm state alert will be issued once every second until the secure state is restored or until the Flag is set to OFF.		
	F0	Alarm Alert Flag OFF.	
	F1	Alarm Alert Flag ON.	
I*n*	Query the sensor.		
	I0	Display Sensor Alarm Status	
	I1	Display Temperature	
	I2	Display All Status and Settings	
	I3	Displays the product info	
R	Software Initiated Remote Test		
S*n*	Set sensor identifier. Only the numbers (*n*) 1-256 maybe be used as sensor identifiers; factory switches are assigned 0 by default. A new identification number may be assigned at any time.		
Z!	Complete hardware reset to factory defaults
